To whom it may concern:

As a Computer Science major at the New Jersey Institute of Technology's Honors College who is passionate about coding and enjoys creatively solving problems, I'd love to bring my experience and enthusiasm to the TeamName team at CompanyName.

Some of my qualifications include:

- Interning at Capital One's Financial Technology team to optimize and deploy a Spark-based data engineering pipeline on AWS using Databricks and LLMs
- Worked on multiple AI projects with advanced LLM models featuring Retrieval-Augmented Generation (RAG) algorithms
- Awarded a full-ride merit scholarship to NJIT's Honors College, given to less than 5% of applicants
- Interned with Relm AI to implement robust data infrastructure using PostgreSQL, Redis, and Docker
- Won 1st Place in Inspire2Dev hackathon for advanced full-stack project built and deployed on Xcode
- Written a recursive-descent parser, tokenizer, and lexical analyzer in C++ for Fortran-95
- First author on software engineering research paper published through George Mason University's CS Lab

Being able to work with cutting edge technology and learn from experienced mentors is an amazing opportunity and I believe CompanyName will be able to help me accomplish this. Aside from my current programming knowledge, I am always looking to learn new concepts and developmental techniques to increase the success of your organization. I've attached a copy of my resume that details my skills and experience in various leadership positions. I can be reached anytime via my email at 713rvshah@gmail.com. Thank you for your time and consideration.

Sincerely,

Rohan Shah
